

Application No.: 10/777,264

Docket No.: JCLA11985

In The Specification:

Please amend the paragraph [0021] as follows:

[0021] When the cuff 300 is in use, the cuff is wrapped around the arm of the subject, wherein the first adhering region 350 and the second adhering region 360 disposed on the strap unit 310 are facing the outside. One end of the strap 310 passes through the ring and is folded back for the first adhering region 350 to affix to the second adhering region 360. Further, the cuff 300 is closely wrapped around the arm of the subject. Moreover, since the ring 320 is fastened to the strap unit 310 along a direction of a straight line L1 which is not perpendicular to the outstretch direction L2 of the strap unit 310, from Fig. 3B, the strap unit 310 is so defined by the ring 320 with its upper side wider than its lower side so that the cuff 300 can be closely and tightly wrapped around the arm of the subject to increase the blood-pressure measuring accuracy via using the cuff 300 because the strap unit 310 is able to form a cone which matches the arm of the subject, as shown in Figs.4A and 4B.
